

MATH 134 Calculus 2 with FUNdamentals

Sample Final Exam Questions

Below are some **sample** final exam questions from past exams. **Note:** Collectively, these are not intended to represent an actual exam nor do they completely cover all the material that could be asked on the exam.

1. Define $A(x) = \int_0^x f(t) dt$ for $0 \leq x \leq 5$, where the graph of $f(t)$ is given below.

- (a) Find $A(0)$, $A(3)$ and $A(5)$.
 - (b) Find $A'(1)$ if it exists. If it does not exist, explain why.
 - (c) Find $A''(1)$ if it exists. If it does not exist, explain why.
 - (d) Find the intervals on which $A(x)$ is increasing and decreasing.
 - (e) Find the intervals on which $A(x)$ is concave up and concave down.
2. Evaluate the following integrals:

(a) $\int \sqrt{2x+1} + \sin(3x) dx$

(b) $\int \sec^2(2\theta) e^{\tan(2\theta)} d\theta$

(c) $\int t^6 \ln t dt$

(d) $\int \frac{z^2}{\sqrt{1-z^2}} dz$

(e) $\int \frac{21}{2x^2 + 5x - 3} dx$

3. Approximate the value of the integral $\int_1^3 \cos(x^2) dx$ using the given rule:

(a) Left-hand Sum L_4

(b) Midpoint Rule M_4

4. Let R be the region in the first quadrant bounded by $y = \sqrt{x}$ and $y = x^2$.

(a) Sketch the region R and find its area.

(b) Find the volume of the solid of revolution obtained by rotating R about the x -axis.

(c) Find the volume of the solid of revolution obtained by rotating R about the line $y = 1$.

5. Sequences and Series:

(a) Find a formula for the general term a_n (start with $n = 1$) for the sequence

$$-\frac{1}{2}, \frac{1}{4}, -\frac{1}{8}, \frac{1}{16}, -\frac{1}{32}, + \dots$$

(b) Does the sequence given by $a_n = \ln \left(\frac{1 + en^3}{4 + n^3} \right)$ converge or diverge? If it converges, find the limit.

(c) Find the sum of the geometric series: $18 - 6 + 2 - 2/3 + 2/9 - + \dots$

6. Determine whether the given infinite series converges or diverges using any of the tests from class or the text. You must provide a valid reason to receive full credit.

(a) $\sum_{n=1}^{\infty} \frac{n^5}{100n^5 + 1}$

(b) $\sum_{n=1}^{\infty} \frac{1}{n^{1.01}}$

(c) $\sum_{n=1}^{\infty} ne^{-2n}$

(d) $\sum_{n=1}^{\infty} (-1)^{n+1}$

7. Find the solution to the given initial-value problems:

(a) $\frac{dy}{dt} = \frac{y}{1 + t^2}, \quad y(0) = 3.$

(b) $\frac{dy}{dx} = -2x^2e^y, \quad y(3) = -\ln 9.$

8. Suppose that Auntie Pat is cooking her Thanksgiving turkey (tofurkey for you vegetarians) for friends and family. The guests are planning to arrive at 5:00 pm. She preheats the oven to 400°F. Suppose the initial temperature of the turkey is 50°F. She places the turkey in the oven at 10:00 am. By noon the turkey has cooked to a temperature of 80°F. Using Newton's law of cooling (or warming), at what time (to the nearest minute) will the temperature of the turkey be 150°F (medium rare and ready to serve)? Assume that the oven has a constant temperature of 400°F throughout the cooking. Does she make it in time for the guests or will she be serving hors d'ouvres for a while?

9. Calculus potpourri:

- (a) If $F(x) = \int_{x^2}^5 \cos(\sqrt{t} + \pi) dt$, find $F'(\pi)$.
- (b) Derive the formula for the volume of a sphere of radius r by rotating the top half of the circle $x^2 + y^2 = r^2$ about the x -axis.
- (c) Find the average value of the function $g(x) = x \sin x$ over the interval $0 \leq x \leq \pi$.
- (d) Suppose that $p(x)$ is a piecewise function defined as follows:

$$p(x) = \begin{cases} 0 & \text{if } x < 0 \text{ or } x > 2 \\ Cx^2(2 - x) & \text{if } 0 \leq x \leq 2. \end{cases}$$

Find the value of C which makes p a probability density function.

- (e) Suppose that $p(x)$ is a probability density function and that $p(x)$ is an even function. If $\int_2^\infty p(x) dx = 0.3$, what is $P(-2 \leq x \leq 2)$?
- (f) TRUE or FALSE: If true, provide a brief explanation. If false, give a counterexample to the statement.

If $\lim_{n \rightarrow \infty} a_n = 0$, then the series $\sum_{n=1}^{\infty} a_n$ converges.

10. **Note: This question will be on the exam, so prepare your answer ahead of time.**

Pick one topic or idea from the course that you found interesting.

- (a) Explain why this particular topic was interesting to you.
- (b) What more would you like to learn about this topic?
- (c) Pick a problem related to this topic and solve it.
