

**MATH 392**  
Spring 2016

**Project Comments (5/9/16)**

It would be helpful to me in designing future project courses if you could answer the following questions. These are not part of the evaluation of your work on the project or in the course. Please provide explanations, especially when it comes to features that you would like to see done differently.

1. Was there an appropriate balance of ordinary course work and work on the project? If not, how would you change the balance?
2. Given the scope of the project, do you feel you had sufficient time to develop it and work on it?
3. Were the project guidelines sufficiently detailed? If not, in which aspect of the project would more detailed guidelines have been helpful?
4. Was your group able to balance the work load on the project so that group members could

contribute equally overall? If not, do you have suggestions how this might be improved?

5. Was your project interesting to you?

6. Did it matter for your group that other groups were working on related topics? If so, how?

7. Were you able to get help on your project in a timely manner?

8. Additional Comments:
