3.0	.4987	.4987	.4987	.4988	.4988	.4989	.4989	.4989	.4990	.4990

At first glance, it appears that Table 13-1 can only be used for positive  $z$ -scores (positive values of  $c$ ). However, because of the symmetry of the standard normal curve, the area between  $z = -c$  and  $z = 0$  is equivalent to the area from  $z = 0$  to  $z = c$ . So finding the area between  $z = -2.09$  and  $z = 0$  is equivalent to finding the area between  $z = 0$  and  $z = 2.09$ .
