- (1) What is wrong with this proof?

**Theorem 0.1.** *If  $n^2$  is positive, then  $n$  is positive.*

*Proof.* Suppose that  $n^2$  is positive. Because the conditional statement “If  $n$  is positive, then  $n^2$  is positive” is true, we can conclude that  $n$  is positive.  $\square$

- (2) What is wrong with this proof?

**Theorem 0.2.** *If  $n$  is not positive, then  $n^2$  is not positive.*

*Proof.* Suppose that  $n^2$  is positive. Because the conditional statement “If  $n$  is positive, then  $n^2$  is positive” is true, we can conclude that  $n$  is positive.  $\square$

- (3) Is the following argument correct? It supposedly shows that  $n$  is an even integer whenever  $n^2$  is an even integer.

Suppose that  $n^2$  is even. Then  $n^2 = 2k$  for some integer  $k$ . Let  $n = 2l$  for some integer  $l$ . This shows that  $n$  is even.

- (4) Prove or disprove that the product of two irrational numbers is irrational.

- (5) Prove that if  $x$  is irrational, then  $1/x$  is irrational.

- (6) Show that if  $n$  is an integer and  $n^3 + 5$  is odd, then  $n$  is even using

- (a) a proof by contraposition.  
(b) a proof by contradiction.

- (7) Prove that if  $n$  is an integer and  $3n + 2$  is even, then  $n$  is even using

- (a) a proof by contraposition.  
(b) a proof by contradiction.

- (8) Use a proof by contradiction to prove that the sum of an irrational number and a rational number is irrational.

- (9) Use a direct proof to show that every odd integer is the difference of two squares.

- (10) Prove that if  $n$  is a perfect square, then  $n + 2$  is not a perfect square.

- (11) Use a proof by contraposition to show that if  $x + y \geq 2$ , where  $x$  and  $y$  are real numbers, then  $x \geq 1$  or  $y \geq 1$ .

- (12) Prove the proposition  $P(0)$ , where  $P(n)$  is the proposition “If  $n$  is a positive integer greater than 1, then  $n^2 > n$ .” What kind of proof did you use?

- (13) Let  $P(n)$  be the proposition “If  $a$  and  $b$  are positive real numbers, then  $(a + b)^n \geq a^n + b^n$ .” Prove that  $P(1)$  is true. What kind of proof did you use?

- (14) Prove that if  $n$  is a positive integer, then  $n$  is even if and only if  $7n + 4$  is even.

- (15) Show that these statements about the integer  $x$  are equivalent:

- (i)  $3x + 2$  is even, (ii)  $x + 5$  is odd, (iii)  $x^2$  is even.
