## Inclusion - Exclusion

Example 1 In a discrete mathematics class every student is a major in computer science or mathematics, or both. The number of students having computer science as a major (possibly along with mathematics) is 25 ; the number of students having mathematics as a major (possibly along with computer science) is 13 ; and the number of students majoring in both computer science and mathematics is 8 . How many students are in this class?

Example 2 How many positive integers not exceeding 1000 are divisible by 7 or 11?

Example 3 Suppose that there are 1807 freshmen at your school. Of these, 453 are taking a course in computer science, 567 are taking a course in mathematics, and 299 are taking courses in both computer science and mathematics. How many are not taking a course either in computer science or in mathematics?

Example 4 A total of 1232 students have taken a course in Spanish, 879 have taken a course in French, and 114 have taken a course in Russian. Further, 103 have taken courses in both Spanish and French, 23 have taken courses in both Spanish and Russian, and 14 have taken courses in both French and Russian. If 2092 students have taken at least one of Spanish, French, and Russian, how many students have taken a course in all three languages?

The Principle of Inclusion - Exclusion
Let $A_{1}, A_{2}, A_{3}, \ldots, A_{n}$ be finite sets. Then
$\left|A_{1} \cup A_{2} \cup \cdots \cup A_{n}\right|=\sum_{1 \leq i \leq n}\left|A_{i}\right|-\sum_{1 \leq i<j \leq n}\left|A_{i} \cap A_{j}\right|+\sum_{1 \leq i<j<k \leq n}\left|A_{i} \cap A_{j} \cap A_{k}\right|-\cdots+(-1)^{n+1}\left|A_{1} \cap A_{2} \cap \cdots \cap A_{n}\right|$

When $n=2$, we have $\left|A_{1} \cup A_{2}\right|=\left|A_{1}\right|+\left|A_{2}\right|-\left|A_{1} \cap A_{2}\right|$.

When $n=3$, we have $\left|A_{1} \cup A_{2} \cup A_{3}\right|=\left|A_{1}\right|+\left|A_{2}\right|+\left|A_{3}\right|-\left|A_{1} \cap A_{2}\right|-\left|A_{1} \cap A_{3}\right|-\left|A_{2} \cap A_{3}\right|+\left|A_{1} \cap A_{2} \cap A_{3}\right|$.

Example 5 Give a formula for the number of elements in the union of four sets.
